Incident Response Policy

Internal policy document | Confidential

1. Response Objectives

The company maintains a documented incident response capability to mitigate the impact of cybersecurity, service outage, and operational disruption events. Response work is coordinated by the incident commander and supported by technology, legal, and business stakeholders.

The organization prioritizes containment, preservation of evidence, and restoration of critical services while ensuring timely communication to affected stakeholders and regulators when required.

2. Escalation Procedures

All suspected security incidents must be reported immediately to the security operations center and line management. High-severity events require notification within one hour to the executive response team.

Post-incident reviews must document the root cause, business impact, remediation actions, and lessons learned. Corrective actions must be tracked to closure.
