Supplier Assurance Policy

Internal policy document | *Confidential*

1. Supplier Review

Business owners must assess supplier performance against agreed service levels, contractual obligations, and risk controls. Reviews must be documented at least annually for critical suppliers and when a significant service change occurs.

Material weaknesses must be assigned an accountable owner and a target remediation date. The supplier relationship manager tracks open actions and escalates overdue high-risk issues to procurement leadership.

2. Assurance Records

Assessment records, service reports, and remediation evidence must be stored in the approved vendor management repository. Access to supplier records is limited to personnel with a business need.

Before renewal, the business owner must confirm that unresolved findings have an approved treatment plan and that the supplier remains suitable for the service provided.
